DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 22 and 32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant Admitted Prior Art (fig. 5) in view of Akram et al. (U.S. Pat. 5994166).

Applicant Admitted Prior Art (fig. 5) discloses a semiconductor device comprising: a system substrate, a digital MCM, a RF MCM and means electrically connecting the RF MCM to the substrate;

the system substrate, the RF MCM on the system substrate, the digital MCM, and means electrically connecting the digital MCM to the system substrate.

Applicant Admitted Prior Art (fig. 5) fails to disclose the RF MCM on the digital MCM or otherwise and wherein the RF MCM and the digital MCM are electrically isolated.

Akram et al. disclose a semiconductor device (fig. 4, column 7, lines 27 et seq.) comprising:

a substrate 402; a substrate 420, wherein a chip 430 mounted on the substrate 420; a substrate 440; wherein a plurality of chips mounted on the substrate 440; and the substrates 402, 420 and 440 all electrically interconnected one on top of another by means of solder bumps, a first electrical connection 428 between the substrate 420 and

the substrate 402, a second electrical connection 450 between the substrate 440 and the substrate 402, the first and second electrical connections being electrically isolated from one another; and wherein the substrate 420 and the substrate 440 are electrically isolated. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the device of AAPA to achieve dense packaging, as shown by Akram et al.

Allowable Subject Matter

Claims 23-31 and 33-40 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
